## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, 7, 9, 11-34, drawn to a polypeptide monomer capable of oligomerization, oligomers and compositions comprising the monomer, and methods for promoting the folding of a polypeptide comprising contacting the polypeptide with the oligomer, wherein the monomer comprises a protein scaffold subunit of phage T4 gp31, classified in class 435, subclasses 68.1, 69.1; class 530, subclass 350.
- II. Claims 1-4, 6, 8, 10-34, drawn to a polypeptide monomer capable of oligomerization, oligomers and compositions comprising the monomer, and methods for promoting the folding of a polypeptide comprising contacting the polypeptide with the oligomer, wherein the monomer comprises a protein scaffold subunit of E. coli GroES, classified in class 435, subclasses 68.1, 69.1; class 530, subclass 350.
- III. Claims 1-4 and 11-34, drawn to a polypeptide monomer capable of oligomerization, oligomers and compositions comprising the monomer, and methods for promoting the folding of a polypeptide comprising contacting the polypeptide with the oligomer, wherein the monomer comprises a protein scaffold subunit made from cpn10-family homologs of E. coli GroES, classified in class 435, subclasses 68.1, 69.1; class 530, subclass 350.

Art Unit: 1636

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as usable together and have different modes of operation and function based upon the differences in structure and function due to the different protein scaffolds upon which the recombinant monomeric proteins are constructed (e.g. T4 gp31, GroES and cpn10-family homologs of GroES). Therefore, the inventions of groups I-III are capable of supporting separate patents.

Claim 1 link(s) inventions of Groups 1-3. The restriction requirement between the linked inventions is subject to the nonallowance of the linking claim(s), claim 1. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Art Unit: 1636

Because these inventions are distinct for the reasons given above and the search required for each of the Groups is not required for the other Groups (e.g. T4 gp31 proteins versus E. coli GroES), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
